

# THE STIFFI SWITCH BARREL KIT

**IT'S NOT OFTEN IN ANY WALK OF LIFE** that you find a product that is truly the complete package. Many products in the world do one or two or even three things very well, but at the expense of doing other things poorly. Like the rest of the world, this is true in paintball; some paintball guns are very fast, but aren't very accurate while others are extremely accurate but not very air efficient. The paint that shoots the straightest and breaks best on target just won't come out the end of your gun in one piece, while the paint you can get out the end of your barrel would bounce off the broad-side of the barn you wish you could hit with it. It's rare that any product, in any industry, does just about everything very well but one of the few paintball products that can make that claim is the Stiffi Switch barrel kit.

Many make the mistake of thinking that a paintball gun's barrel is just a simple tube. However, a paintball gun barrel is actually a complicated device asked to do a great many things. A paintball gun's barrel must accelerate what is essentially a cross between a water balloon and a musket ball to 300 feet per second in an average of ten to twelve inches of length, make that inherently unstable and aerodynamically unsound object fly as straight as physically possible and do those things when constructed of a relatively inexpensive yet lightweight and durable material. More recently, paintball players have begun to request that a paintball gun barrel do those things while also looking good and being able to withstand repeated dives into bunkers, all while being adaptable to various sizes of paintballs. The Stiffi Switch barrel kit manages to do all of those things and do them well.

Stiffi's Switch barrel kit offers the extremely low weight that only carbon fiber can provide – the barrel weighs practically nothing – and manages to deliver superb accuracy while also reducing noise thanks to several rows of inline porting. The kit is delivered with a single front in a variety of colors, finishes and patterns to fit most players' tastes, in twelve, fourteen or sixteen inch lengths and features four aluminum sizers that allow the user to match their bore size to the size of the paintballs they will shoot. The Switch kit is available in Autococker, Smart Parts, Angel and Spyder threads, enabling them to be used with practically any mid to high-end paintball gun from the Ion to the Shocker, Ego, Geo, Luxe or Dye or Proto Matrix. Stiffi barrels have been used by such teams as Joy Division and Miami Rage to win professional paintball tournaments.

Ridiculously light, attractive, accurate, quiet and versatile, the Stiffi Switch barrel kit is an outstanding product, able to do practically everything asked of a paintball gun barrel very, very well. While it certainly isn't the least expensive barrel in the world, players who require their paintball gun to be as light and accurate as possible while still turning heads in the staging area must give the Switch Kit a serious look.
